

iDEK USA[®]

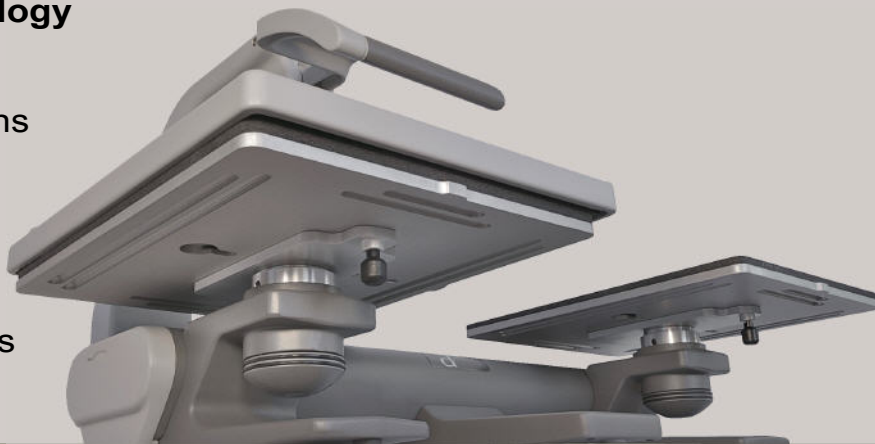

INLINE MODULAR PRESS

It takes a professional to go commercial.

The advanced heat press technology we utilize is unlike any other...

Until now, manual heat press options have been limited to clamshell or swing-away type presses. The In-line movement creates a third, superior style. Combine that with the dual and specialty Dek™ options and you end up with a press that offers a competitive edge in a performance driven arena.

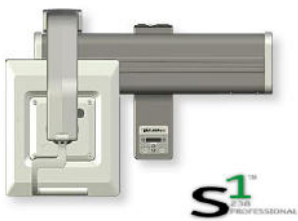

d2 238 Commercial™ Press

The d2 Commercial™ heat press is the ultimate pressing machine. This model is designed for volume and efficiency. It comes equipped with dual pedestals and two 14" x 17" Deks™ (Other Dek™ choices available). The shirt Dek™ can instantly be configured from Portrait to Landscape using the Quikklik™ placement lock. Vertical format is ideal for imprinting on youth size shirts. The broad Horizontal format is perfect for adult size shirts. Efficiency is maximized by our digital control console with pre-set programs for vinyl; inkjet, laser transfers, plastisol transfers; sublimation; and a manual mode.

d2 340 Wide Format™ Press

The d2 340 Wide Format™ heat press continues to expand on the capabilities of your production setup. Increased Dek™ size of 17" x 20" times two, allows for larger surface area of pressing. Coupled with our interchangeable Dek™ options, there is almost no size or type of job that cannot be completed in both low and high production runs.

s1 238 Professional™ Press

The s1 Professional™ heat press is the foundation of the entire iDek product line. It comes equipped with one pedestal and a 14" x 17" image Dek™. The nice thing about the s1™ is the ability to upgrade at any point in the development of your business. All of our specialty Deks™ are compatible additions to the press, and you can add a second workstation simply by purchasing an additional pedestal and image Dek™. The benefit is timed release production capacity.

s1 340 Wide Format™ Press

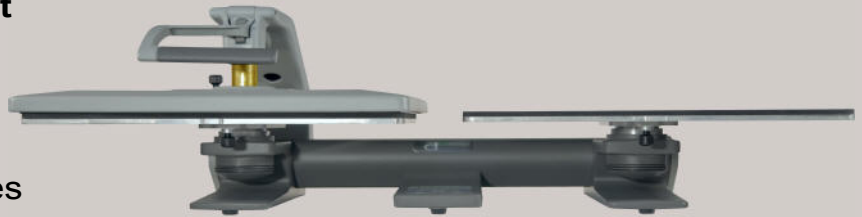

The s1 340 is a step up from the s1 238 with a 17" x 20" heater and matching Dek™ that accommodates prototyping, one up and smaller production runs. Just like the s1 238 Professional™, it gives you the option of adding a second pedestal and any of our interchangeable Deks™, when the time is right for your business to expand. Even if you are not ready for a second Dek™, you have the ability to diversify the type of jobs you do, with a pocket/universal, cap/universal or long sleeve/pant Dek™ upgrade.

Engineered so you don't have to be an engineer.

Performance driven to the highest level of production efficiency...

The iDek heat press utilizes the latest in digital technology and proprietary manufacturing processes to provide a press like no other.

Slide Arm Assembly/Chassis: The robust aluminum chassis is the sturdy foundation of every modular component associated with our press. It secures the two parallel steel glide rails through stainless steel ball bearings. It is the structural support for the single or dual pedestals and control console. Suspended from the slide arm is a low profile upper heat Dek™ that utilizes a border to border web design element system that provides an even and consistent heat disbursement. A Quikklik™ release pin allows for format change of the upper heat Dek™ from portrait to landscape orientation to accommodate specific size requirements ranging from youth through the largest adult t-shirts.

The Portrait/Landscape Advantage (Model 238 Only): Our standard 14" x 17" Dek™ quickly changes from horizontal to vertical format, top and bottom using a Quikklik™ release pin that is exclusive to our press alone. The portrait/landscape function is also standard on the 10" x 14" Dek™ and Cap with 10" x 10" Universal Dek™, making this feature a versatile benefit to the user. The portrait position is perfect for youth t-shirts while landscape works best for wider format adult sizes. Over/under loading technique is possible because of the cantilevered styling of the pedestal. Ghosting from unwanted transferring to the next layer of the garment are eliminated without the need for pillows or parchment paper liners.

Front And Center Control Console: Our digitally smart microprocessor minimizes setup time and maximizes efficiency. Three pre-programmed modes allow the operator to work at a precise pace for the selected process with the assistance of a cycle done alarm. An additional mode allows for custom settings.

P1. Specialty Materials like vinyl: press temperature of 350 degrees for 20 seconds.

P2. Inkjet or Plastisol transfers: press temperature of 375 degrees for 15 seconds.

P3. Sublimation: press temperature of 400 degrees for 30 seconds.

Manual: Any temperature and/or time you designate.

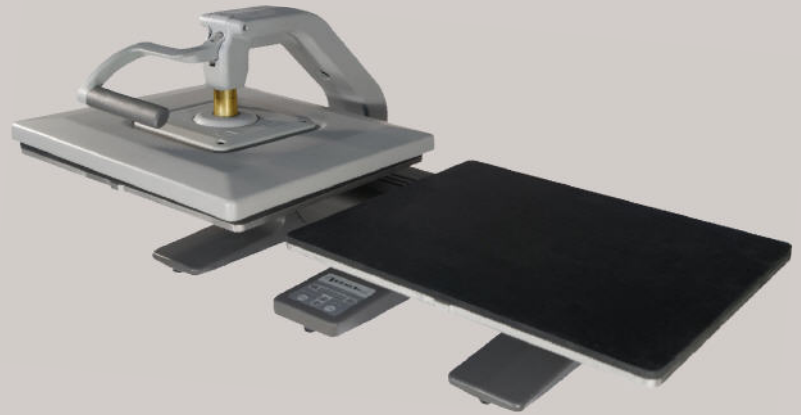

Unique lateral motion: "In Line" lateral movement is designed with many things "In Mind." The heat Dek™ glides easily and totally away from the lower shirt or specialty Dek™ allowing easy and fast reload of substrates. The ergonomically smart layout keeps everything compact and within easy reach to save several seconds with every press cycle adding up to significantly more production (more income) on a daily, weekly, and monthly basis. The unique configuration keeps heat directed down at all times which allows operators to work comfortably and more productively.

Taking the heat press to the next level, and beyond.

There is more to heat pressing than printing T-shirts.

Let the iDek take you to a whole new level. Multiple work stations and our interchangeable Deks™ complete the full service shop. No new tools, no new programs, just pure production magic.

Increase production by upgrading your existing press!

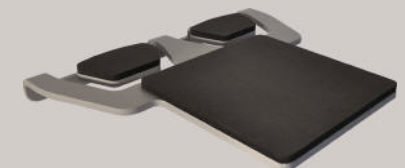

Standard iImage Deks™

We offer a wide range of shirt Dek™, sizes to fit nearly any application. Available in 10" x 10", 10" x 14", 14" x 17" and 17" x 20". The underside of each has unique mating keyholes that interact with the Quikklik™ mechanism for effortless exchange of Deks™. The upper side of each has a heavy-duty 3/8" high temperature silicone pad for optimum pressing.

Pocket/Universal Dek™

Pockets are just one of the ways this custom Dek™ can be of benefit. Any dress shirt, polo shirt or t-shirt with a pocket can be imprinted using the dual pocket Deks™. Some other uses include corporate exposure, event recognition or uniforms. The two pocket sized Deks™ have a custom taper to secure the pocket in place while the image is being transferred. The 5" x 5" Universal Dek™ is ideal for tag-less label imprints on the inside or outside of the back of the shirt neck. Also beneficial for tote bags, puzzles, mouse pads and more.

Cap/Universal Dek™

Never before has there been a "flat" Cap press, let alone one that can press two caps at once. The unique shape of each image Dek™ holds the bill of the hat firmly out of the way during the press mode while keeping the press area snug to the lower Dek™ surface. Facilitates images, text or numbers up to 3 inches in height and 4 inches in length. The 10" x 10" Universal Dek™ is ideal for tote/gym bags, youth/pet shirts, plaques, tiles and more.

Long Sleeve/Pant Dek™

Imprinting long sleeves and pant legs is a business in itself. Fleece sweats or nylon outerwear are an essential component for nearly every sport, indoors and out. Countless corporate, civil and industrial uniforms provide recognition or identity through embellishment. Our Long Sleeve/Pant Dek™ replicates the shape of the item to be imprinted. There is an image Dek™ suspended on both sides of the Quikklik™ plate for dual operation and ease of over/under loading. Each Long Sleeve Dek™ has individual pressure adjustment for high resolution transfers.

Expanding horizons with the ultimate heat press.

A press with the user in mind...

In the last thirty years our phones have learned to play music and take pictures, and our cars have learned to navigate for us, but our heat presses have not changed... until now. The years experience behind the development of the iDek Inline Modular Heat Press facilitate the jump into the future in stride with the advances in the new digital technology. With everything else in our lives doing more, it is not too much to expect a heat press that does more as well.

Proud to be a member of the iDek Family!

“At Halcyon Digital, innovative garment printing and design is our forte' so we need the best equipment available. Our two iDek d2's have become integral parts of our production day, giving us the edge on speed and turn around time. We ship out thousands of sublimated garments every week and rely heavily on our iDek's to maintain our relationships with our most important accounts.”

-Mark Collins (Halcyon Digital)

“World One Performance is an official distributor of select high-end tuner parts. In addition to maintaining an 8000 sq. ft. showroom and install facility, we participate regularly in regional meets showcasing our cars. We press about 300 shirts as giveaways before each event. We chose the iDek d2 Commercial™ because it gives us the ability to load a shirt while pressing another. This is especially important when doing front and back images. Our iDek saves us a lot of time. We like the fact that if we want, we can add on a Dek™ to do long sleeves, caps or pockets without purchasing a new press.”

-Armin Ausejo (World One Performance)

“Two years ago I started pursuing a small business project that led me to Bob at iDek. He walked me through the process that would allow me to make my product. I use this same process to make more products than I had originally envisioned. The iDek staff answered all my questions and went out of their way to make sure I was satisfied. I truly appreciate the hospitality and the ability to make a career for myself.

-Ben Frederick (Hater Paintball LLC)

Whether looking at heat pressing from a novice point of view, or as a seasoned professional, we think you will find the quality, ingenuity, reliability, and engineering of our products incomparable and unsurpassed.

- iDekUSA

Create a business within a business.

In business, leisure and sports, we are exposed every day to images, names, words and numbers imprinted on all sorts of garments and products. Whether it's 500 event shirts or a dozen team jerseys, the promotional message you see may have been created by the method of heat pressing.

With an iDek every sleeve, every pocket, every cap, and the front and back of every shirt becomes an opportunity to advertise. And that's if you are thinking only of clothing. The iDek presses versatility allows all manner of substrates to be processed by one machine.

Time, it's something you'll never get back. With the iDek Press Faster™ philosophy one person with one press can complete production runs in record time.
