

ACCUFAST® P4/PCS

The First Print and Cure System for low to medium volume mailers.

Sooner or later, a customer will want you to address a glossy post card or flyer. Or maybe someone will ask you to print on a bunch of credit cards. Printing isn't necessarily the problem. Getting the ink to dry is the real issue. The **ACCUFAST® P4 / PCS** links a feeder, a printer and a UV cure conveyor to create the most flexible system available for any shop .

The Modules:

ACCUFAST® CS3/UV Curing Conveyor. (over for details). The CS3/UV solves the hard drying problems that cause the most hassle in any shop. Whether you use UV or not, this is a slick conveyor that makes room for productivity by taking work away.

ACCUFAST® P4 imager. The P4 is an amazing machine. Variable speed, 2 inches of print that can print the address and return address in one pass, vacuum transport, individual head height adjustments, and more.

ACCUFAST® feeders – HDF Model shown. Set the separators, drop in the pieces and go. ACCUFAST® Feeders will handle most everything you can throw at them, 10 x 13 envelopes a quarter inch thick for example. Also available, but not shown is the ACCUFAST® card feeder to make short work of credit cards, and other undersized media.

ACCUFAST® System Stand. The P4, HDF and the Credit Card feeder (not shown) all fit on this stand. Everything in its place, on casters to roll away when not in use and position for maximum work flow efficiency when it is.

ACCUFAST® CS3/UV

There are thousands of folks with an HP based printer who share a single problem. They can't print on most glossy stock because the ink won't dry. Until now there were two choices: buy a large power hungry IR dryer to blast the piece with heat and light, or lose profit by farming the job out to a guy with a solvent system or a bigger dryer. ACCUFAST® just changed all that with UV cure inks for the HP pen and the curing systems to dry them on just about anything.

The **ACCUFAST® CS3/UV** is a self contained curing conveyor that works with the new UV cure inks. Now you can print on materials like plastic cards, foils, glossy cards and flyers. Just load the ink in the printer, roll up the **ACCUFAST® CS3/UV** and run the job. Simple, easy and affordable. To optimize production, use the CS3/UV with an ACCUFAST® printer where print and feed speed rates are linked to curing speed.

Specifications:

Physical:

- Cure width: 3"
- Speed variable from 15" - 60" per sec.
- Conveyor height variable, width 14"
- Material thickness 1/4" max
- Belt length 3'
- Vacuum assist transport
- System Footprint 72" x 24"

Electrical:

- Conveyor – 110 Vac 2 amps.
- Cure Unit – 220 Vac 10 amps.
- Print and Feed – 110 vac 4 amps

Controls:

- Variable speed
- UV Cure linked to feeder or printer
- UV Cure Head interlocked.
- Windows XP PC control
